DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Hovey(U.S. Patent No. 4,043,637).

Regarding claim 1, Hovey discloses; a transparent synthetic resin material(col 9, lines 25-30, CR-39) and at least one photochromic dye incorporated therein(Col 8, line 48, metal dithizonates), wherein said photochromic synthetic resin object further comprises at least one contrast-increasing agent(col 12, lines 25-50) which absorbs light in the visible wavelength range from 380 nm to 500 nm such that when the at least one photochromic dye is in a lightened state, the photochromic synthetic resin object exhibits an average transmission of from 5% to 30% in the visible wavelength range from 380 nm to 500 nm(fig 3).

Regarding claim 2, Hovey discloses the lightened state of at least one photochromic dye, the photochromic synthetic resin object has an average transmission of at most 20% in the visible light region of 380 nm to 500 nm(fig 3).

Regarding claim 3, Hovey discloses the lightened state of at least one photochromic dye, the photochromic synthetic resin object has an average transmission of at most 10% in the visible light region of 380 nm to 500 nm(fig 3).

Regarding claim 4, Hovey discloses the contrast-increasing agent comprises a coloring agent selected from the group consisting of pigments and organic dyes(col 12, lines 25-50 and col 3, lines 29-35)).

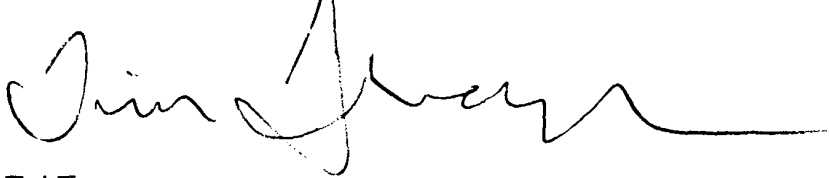

Regarding claim 5, Hovey discloses the contrast-increasing agent comprises a reflective or an absorbent coating(col12, lines 38-39).

Regarding claim 6, Hovey discloses the contrast increasing agent comprises a coloring agent selected from the group consisting of pigments and organic dyes in combination with a reflective or absorbent coating(col12, lines 25-50).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Buazza et al.(U.S. Patent No. 6,416,307) are pertinent to the application since they pertain to an photochromic device.
